

Introducing

AI Email Assistant

AI Email Assistant is an intelligent email automation workflow designed for n8n.

- ◆ Gmail inbox
- ◆ AI chatbot
- ◆ n8n workflow
- ◆ Email automation dashboard

Featured Features

☐ Automatic Email Classification	☐ AI Reply Generation	☐ Complaint Ticket System
☐ Google Sheets Logging		☐ Attachment Handling

AI Email Assistant Pro for n8n

Enterprise User Manual

Chapter 01 – Customizing the Workflow

Overview

Every business has unique processes and communication styles.

This workflow has been designed to be fully customizable, allowing you to adapt it to your brand, products, and customer support requirements without rebuilding the automation.

In this chapter, you'll learn how to personalize the workflow to match your business needs.

Customization Overview

Image Title: Workflow Customization Areas

- ① AI Reply Nodes
- ② AI Subject Generator Nodes
- ③ Category Switch
- ④ Google Sheets
- ⑤ Gmail Send Nodes
- ⑥ Ticket Generator

Customize Your Company Name

The AI-generated replies include your company signature.

Locate each **AI Reply** node and update the signature section.

Default Example

Best regards,

Customer Support Team

Customized Example

Best regards,

ABC Technologies

Customer Success Team

support@abctechnologies.com

www.abctechnologies.com

 **Tip:** Keep your signature consistent across all categories to maintain a professional brand identity.

Customize AI Reply Tone

Every AI Reply node contains its own prompt.

You can modify the tone of responses based on your business style.

Professional

Best for:

- B2B Companies
- Corporate Support

Friendly

Best for:

- Online Stores
- Small Businesses

Formal

Best for:

- Financial Services
- Healthcare
- Legal Firms

Example Prompt Enhancement

Current Prompt:

Reply professionally to the customer's email.

Enhanced Prompt:

Reply in a professional, friendly, and empathetic tone.

Keep the response concise.

Use business English.

Maintain a positive customer experience.

End with the company signature.

Customize AI Subject Generation

Each category contains its own Subject Generator.

Examples:

- Order Subject AI
- Inquiry Subject AI
- Complaint Subject AI
- Thank You Subject AI

You can customize how subjects are generated.

Example instruction:

Generate a concise, professional email subject.

Avoid unnecessary punctuation.

Maximum 8 words.

Return only the subject.

Customize the Company Signature

Update every reply node with your own signature.

Example

Best regards,

ABC Technologies

Customer Success Team

support@company.com

www.company.com

Customize Email Categories

By default, the workflow supports:

- Order
- Inquiry
- Complaint
- Spam
- Thank You

Businesses may require additional categories.

Examples:

- Refund Request
- Returns
- Shipping Status
- Technical Support
- Billing
- Partnership
- Job Application
- Feedback

Adding a New Category

To add a new category:

1. Open the **Category Switch** node.

2. Add a new Routing Rule.
3. Name the new category.
4. Connect it to a new AI Reply node.
5. Add a Subject Generator.
6. Add a Gmail Send node.
7. Connect a Google Sheets Log node.

Customize Google Sheets

You can add or remove columns based on your reporting requirements.

Example Columns

Column	Purpose
Customer Name	Sender Name
Email Address	Customer Email
Category	Email Category
Subject	AI Generated Subject
Reply	AI Generated Reply

Ticket ID	Complaint Tracking
Status	Pending / Completed
Date	Processing Date

Customize Ticket Format

The Complaint workflow automatically generates Ticket IDs.

You can change the ticket format to match your support system.

Example Formats

TKT-2026-0001

SUP-000245

CASE-10293

HELP-2026-0056

Customize Google Drive Folder

You can rename the upload folder.

Example

Customer Attachments

or

Support Files

or

Client Documents

Customize the Google Sheets Structure

Instead of multiple worksheets, you may use a single master worksheet.

Example

Date	Category	Customer	Subject	Reply	Ticket
------	----------	----------	---------	-------	--------

This approach simplifies reporting and analytics.

Customize Email Templates

Each AI Reply node can include additional instructions.

Examples:

- Include business hours

- Mention refund policy
- Mention delivery times
- Include support phone number
- Include FAQ links

Brand Personalization

To match your company's branding:

Update:

✓ Company Name

✓ Support Email

✓ Website

✓ Signature

✓ Email Tone

✓ Ticket Prefix

✓ Google Drive Folder Name

✓ Google Sheets Name

Business Use Cases

This workflow can be adapted for various industries.

Examples:

E-commerce

- Orders
- Returns
- Shipping
- Complaints

SaaS

- Billing
- Technical Support
- Feature Requests

Agencies

- Client Inquiries
- Project Requests
- Partnership Emails

Education

- Admissions
- Student Support
- Course Information

Healthcare

- Appointment Requests
- Patient Inquiries
- Support

Customization Checklist

Before activating your customized workflow:

- ☐ Company name updated
- ☐ Signature updated
- ☐ Website added
- ☐ Support email updated
- ☐ AI prompts reviewed
- ☐ Categories customized (if required)
- ☐ Ticket format verified
- ☐ Google Sheets updated
- ☐ Google Drive folder confirmed
- ☐ Test email completed

Best Practices

- Keep AI prompts short, clear, and specific.
- Maintain the same writing style across all reply nodes.
- Test every customization before using the workflow in production.
- Update branding information whenever your business details change.
- Keep a backup of the original workflow before making major modifications.

Chapter Summary

In this chapter, you learned how to:

- Personalize AI replies
- Customize AI-generated subjects
- Update company branding
- Add new email categories
- Modify Google Sheets
- Customize ticket formats
- Adapt the workflow for different business types

The AI Email Assistant is now fully tailored to your organization's needs.

Chapter 02 — Spam Workflow

Overview

Spam emails can consume valuable time and reduce the efficiency of customer support operations.

The Spam Workflow is designed to automatically identify unwanted emails and prevent unnecessary AI processing.

Instead of generating replies, spam messages are separated from legitimate customer communications and logged for future reference.

Workflow Position

Incoming Email

Email Classifier

Category Switch

Spam

Spam Log Sheet

Purpose

The Spam Workflow is responsible for:

- Identifying spam emails
- Preventing unnecessary AI replies
- Recording spam activity
- Keeping business email logs organized

How Spam Detection Works

The Email Classifier analyzes every incoming email.

If the email matches spam characteristics, it returns:

spam

The Category Switch automatically routes the email to the Spam branch.

Typical Spam Examples

Example 1

Subject

Congratulations! You Won!

Body

Claim your free reward now.

Click the link below.

Example 2

Subject

Limited Time Investment Opportunity

Body

Earn thousands every week.

Register today.

Example 3

Subject

Exclusive Offer

Body

Buy followers instantly.

Spam Processing Flow

Incoming Email

AI Email Classifier

Category Switch

Spam

Google Sheets

↓

Workflow Ends

No reply is generated.

No customer response is sent.

Spam Log Sheet

The Spam Log stores useful information for auditing.

Recommended columns:

Column	Description
Date	Processing Date
Sender	Customer Email
Subject	Email Subject
Category	Spam
Status	Logged

Why Log Spam?

Logging spam provides several benefits:

- Monitor suspicious activity
- Review blocked emails
- Improve business reporting
- Keep a record of unwanted messages

Recommended Business Practice

Instead of deleting spam immediately:

- ✓ Log it
- ✓ Review periodically
- ✓ Delete manually if necessary

This provides a complete audit trail.

Optional Enhancements

The Spam branch can be extended with additional automation.

Examples include:

Gmail Label

Automatically apply a "Spam" label.

Archive Email

Move spam emails to the archive.

Slack Notification

Notify your support team if a suspicious email is detected.

Security Alert

Send an internal alert when repeated spam is received from the same sender.

Workflow Diagram

Incoming Email

Email Classifier

Spam

Spam Log Sheet

Best Practices

- ✓ Review the Spam Log regularly.
- ✓ Keep spam separated from customer support logs.
- ✓ Avoid sending automated replies to spam emails.
- ✓ Test spam classification periodically to ensure accurate routing.

Troubleshooting

Issue

Legitimate email classified as spam.

Solution

Review and refine the Email Classifier prompt to better distinguish between promotional content and genuine customer inquiries.

Issue

Spam email not logged.

Solution

Verify that the Spam Log Sheet node is connected to the Spam branch and the correct worksheet is selected.

Chapter Summary

In this chapter, you learned:

- How the Spam Workflow operates
- How spam emails are identified
- How spam emails are logged
- Best practices for handling spam
- Ways to extend the Spam branch for additional business needs

Chapter 03 — Google Sheets Logging

System

Overview

The Google Sheets Logging System is one of the core components of the AI Email Assistant.

Every processed email is automatically recorded, allowing businesses to maintain a structured history of customer interactions.

Instead of manually tracking emails, the workflow creates organized records that can be searched, filtered, exported, and analyzed at any time.

Logging Architecture

Customer Email

Workflow Processing

Google Sheets

└── Order Log

└── Inquiry Log

└── Complaint Log

└── Ticket Log

└── Spam Log

└── Thank You Log

Why Email Logging Matters

Every processed email becomes a business record.

Logging provides:

✓ Complete communication history

✓ Easy reporting

✓ Customer tracking

✓ Complaint management

✓ Business analytics

✓ Internal auditing

Order Log Sheet

The Order Log stores all customer order requests.

Recommended Columns

Column	Description
Date	Date processed
Customer Email	Customer email address
Customer Name	Sender name
Subject	AI generated subject
AI Reply	Reply sent to customer
Status	Completed

Example Record

Date	Email	Subject	Status
------	-------	---------	--------

22-Jul-2026	customer@email.c om	Order Confirmation	Completed
-------------	------------------------	-----------------------	-----------

Inquiry Log Sheet

The Inquiry Log stores customer questions.

Recommended Columns

Column	Description
Date	Processing date
Customer Email	Sender
Subject	AI generated subject
AI Reply	Response sent
Status	Completed

Example

Date	Email	Subject
22-Jul-2026	john@email.com	Shipping Inquiry

Complaint Log Sheet

Complaint emails require additional tracking.

Therefore this sheet contains more information.

Recommended Columns

Column	Description
Date	Processing date
Customer Email	Sender
Subject	AI Subject

This sheet stores every generated ticket separately.

Keeping ticket information separate makes support management much easier.

Recommended Columns

Column	Description
Ticket Number	Generated Ticket ID
Customer Email	Sender
Date	Created Date
Status	Open
Notes	Optional

Example

Ticket	Email	Status
TKT-20260721-2483	customer@email.com	Open

Thank You Log Sheet

Stores appreciation emails received from customers.

Recommended Columns

Column	Description
Date	Processing date
Customer Email	Sender
Subject	AI generated subject
Reply	AI response

Spam Log Sheet

Stores emails classified as spam.

Recommended Columns

Column	Description
--------	-------------

Date	Processing date
Customer Email	Sender
Subject	Email subject
Category	Spam
Status	Logged

Data Flow

The workflow writes data into Google Sheets automatically.

Customer Email

AI Processing

Generate Reply

Generate Subject

Google Sheets

Log Saved

Data Organization

Keeping separate worksheets provides several advantages.

Better Organization

Each email type has its own worksheet.

Faster Searching

Support teams can quickly locate specific emails.

Better Reporting

Managers can generate reports by category.

Easier Maintenance

Old records can be archived without affecting other categories.

Best Practices

- ✓ Keep worksheet names simple and consistent.

Examples:

Orders

Inquiries

Complaints

Tickets

Spam

Thank You

- ✓ Avoid renaming worksheets after connecting them to the workflow.
- ✓ Keep the spreadsheet in a secure Google account.
- ✓ Regularly back up your Google Sheets data.

Recommended Spreadsheet Structure

AI Email Assistant Logs

|

|—— Orders

|—— Inquiries

|—— Complaints

|—— Tickets

|—— Spam

|—— Thank You

Reporting Ideas

The collected data can be used for business reporting.

Examples include:

Number of Orders Received

Number of Customer Inquiries

Total Complaints

Open Tickets

Spam Volume

Customer Appreciation Messages

Maintenance Recommendations

Periodically review your log sheets.

Recommended tasks:

- Archive old records.
- Remove duplicate entries if any.
- Verify ticket statuses.
- Keep worksheet permissions secure.

Troubleshooting

Issue

Data is not appearing in the sheet.

Solution

Verify that the correct spreadsheet and worksheet are selected in the corresponding Google Sheets node.

Issue

Information appears in the wrong worksheet.

Solution

Check the connections from the **Category Switch** to ensure each branch points to the correct Google Sheets node.

Issue

Missing customer information.

Solution

Review the expressions configured in the Google Sheets node and confirm they reference the correct fields from previous nodes.

Chapter Summary

The Google Sheets Logging System provides a complete history of every processed email.

It enables organized record-keeping, efficient customer tracking, and valuable business reporting.

By maintaining separate worksheets for each category, the workflow remains scalable and easy to manage as email volume grows.

Chapter 04 – Workflow Maintenance & Best Practices

Overview

Like any business automation, an AI-powered email workflow should be maintained regularly to ensure consistent performance, reliable processing, and long-term stability.

This chapter explains how to maintain, monitor, optimize, and update your workflow while

following recommended operational best practices.

Workflow Maintenance Overview

Monitor

Review Logs

Optimize Workflow

Update AI Prompts

Backup Workflow

Deploy Updates

Why Maintenance Is Important

Regular maintenance helps ensure that your workflow:

- Processes emails reliably
- Produces consistent AI responses
- Maintains accurate records
- Remains compatible with connected services
- Continues to meet business requirements

Monitor Workflow Executions

Review workflow executions regularly to identify:

- Failed executions
- Interrupted processes
- Delayed responses
- Unexpected AI outputs

Monitoring executions helps detect issues before they affect customers.

Review Google Sheets Logs

Google Sheets serves as the primary activity log for this workflow.

Review your logs regularly to confirm:

- New emails are being recorded
- Complaint tickets are generated correctly
- Customer information is complete

- AI-generated subjects and replies appear as expected

Verify AI Responses

Periodically review generated replies to ensure they remain:

✓ Professional

✓ Accurate

✓ Relevant

✓ Brand Consistent

If responses no longer match your business style, update the AI prompts.

Keep AI Prompts Updated

As your business evolves, your AI prompts should evolve as well.

Examples of updates include:

- New products or services
- Updated business policies
- Revised shipping information
- New refund procedures
- Updated contact information

Maintaining accurate prompts improves the quality of every AI-generated response.

Backup Your Workflow

Create a backup before making significant changes.

Recommended backup schedule:

- Before editing prompts
- Before adding new categories
- Before replacing AI providers
- Before updating connected services
- Before deploying production changes

Store backups in a secure location.

Backup Google Sheets

Your workflow data is valuable.

Regularly back up your Google Sheets to prevent accidental data loss.

Recommended methods include:

- Export to Excel (.xlsx)
- Export to CSV
- Duplicate the spreadsheet periodically

Organize Google Drive Files

If attachment uploads are enabled, review your Google Drive folder regularly.

Recommended maintenance:

- Archive older files
- Remove unnecessary documents
- Maintain a clear folder structure

Example:

Google Drive

AI Email Assistant

├── Customer Attachments

├── Archived Attachments

└── Monthly Backups

Optimize Workflow Performance

As your email volume grows, consider the following optimizations:

- Remove unused nodes
- Simplify unnecessary workflow branches
- Keep AI prompts focused and concise
- Review execution history for recurring issues

A streamlined workflow is easier to maintain and troubleshoot.

Credential Management

Review connected credentials periodically.

Ensure that:

- Gmail credentials remain connected
- Google Sheets credentials are active
- Google Drive credentials are valid
- AI provider credentials are working correctly

If a credential changes, update it before reactivating the workflow.

Security Best Practices

Protect your automation by following these recommendations:

- Use dedicated business accounts for connected services.
- Limit access to authorized team members.

- Store API credentials securely within n8n.
- Avoid sharing workflow files that contain sensitive business information.
- Remove unused credentials from your workspace.

Workflow Version Management

Maintain version history whenever significant changes are made.

Example:

Version	Description
v1.0	Initial Release
v1.1	Added Google Drive Attachment Upload
v1.2	Added Complaint Ticket Generator
v1.3	Improved AI Reply Prompts
v1.4	Added Additional Email Category

Version tracking makes future updates easier and provides a clear record of improvements.

Maintenance Schedule

Task	Recommended Frequency
Review Workflow Executions	Weekly
Review Google Sheets Logs	Weekly
Review AI Responses	Monthly
Backup Workflow	Before major changes
Backup Google Sheets	Monthly
Review Credentials	Monthly
Archive Old Records	Quarterly

Best Practices

- ✓ Keep AI prompts clear and focused.
- ✓ Test changes before deploying them.

- ✓ Backup the workflow before major updates.
- ✓ Keep Google Sheets organized.
- ✓ Maintain consistent branding across all AI replies.
- ✓ Monitor workflow executions regularly.
- ✓ Review ticket records periodically.

Troubleshooting Checklist

If the workflow is not behaving as expected:

- ☐ Verify Gmail connectivity.
- ☐ Verify Google Sheets connectivity.
- ☐ Verify Google Drive connectivity.
- ☐ Verify AI provider credentials.
- ☐ Review workflow executions.
- ☐ Test individual workflow branches.
- ☐ Confirm expressions reference the correct nodes.
- ☐ Save and reactivate the workflow after changes.

Long-Term Maintenance

As your business grows, consider:

- Adding new email categories
- Expanding Google Sheets reporting
- Enhancing AI prompts
- Integrating additional business systems
- Improving customer communication workflows

The modular design of this workflow makes future enhancements straightforward.

Chapter Summary

Regular maintenance ensures your AI Email Assistant remains reliable, accurate, and aligned with your business processes.

By monitoring workflow activity, maintaining credentials, reviewing AI responses, and backing up your data, you can keep the automation operating efficiently over time.

Chapter 05 – Customizing AI Models

Overview

The AI Email Assistant has been designed with flexibility in mind.

Rather than being tied to a single AI provider, the workflow can be adapted to work with different Large Language Models (LLMs) supported by n8n.

This allows businesses to choose the AI provider that best matches their requirements for performance, cost, availability, and compliance.

AI Architecture

Incoming Email

↓

AI Model

↓

Email Classification

AI Reply Generation

AI Subject Generation

Customer Reply

Supported AI Providers

The workflow can be configured to work with any compatible AI provider available in n8n.

AI Provider	Supported
Google Gemini	

OpenAI	✓
Anthropic Claude	✓
OpenRouter	✓
Groq	✓
Mistral AI	✓
Ollama (Local)	✓
Azure OpenAI	✓
AWS Bedrock	✓

AI Nodes Used in This Workflow

This workflow uses AI in three primary areas:

1. Email Classification

Determines whether the email belongs to:

- Order
- Inquiry
- Complaint
- Spam
- Thank You

2. AI Reply Generation

Creates a professional customer response.

Each category has its own dedicated AI Reply node.

Examples:

- Order Reply AI
- Inquiry Reply AI
- Complaint Reply AI
- Thank You Reply AI

3. AI Subject Generation

Creates concise and professional email subjects.

Each workflow branch contains its own Subject Generator.

Replacing an AI Provide

Switching to another AI provider typically follows these steps:

1. Add the new AI model node.
2. Connect the appropriate credentials.
3. Select the desired model.
4. Replace the existing AI node connection.
5. Test the workflow.
6. Activate the updated workflow.

No changes to the workflow structure are usually required.

Prompt Compatibility

The prompts included with this workflow are written using standard natural language.

This makes them compatible with most modern AI models.

In most cases, you can switch AI providers without rewriting your prompts.

Choosing the Right AI Model

Different AI models may offer different strengths depending on your use case.

Priority	Recommendation
Fast responses	Lightweight models
High-quality writing	Advanced conversational models
Cost optimization	Budget-friendly models
Privacy requirements	Self-hosted or local models
Enterprise deployment	Enterprise-supported providers

Choose the model that best fits your operational requirements.

Updating AI Credentials

When changing AI providers:

- Create a new credential in n8n.
- Select the new credential in each AI node.
- Save the workflow.
- Run a test execution before activating the workflow.

Testing After Switching Models

After replacing an AI provider, test every workflow branch.

Recommended test scenarios:

✓ Order

✓ Inquiry

✓ Complaint

✓ Thank You

✓ Spam

Verify:

- Correct classification
- Professional replies
- Subject generation
- Successful email delivery
- Google Sheets logging

Optimizing AI Responses

If desired, prompts can be refined to better match your business.

Possible improvements include:

- Adjusting tone (formal, friendly, or conversational)
- Limiting response length
- Including company policies
- Adding business hours
- Including contact information
- Using multilingual responses

Always test prompt changes before deploying them.

Common Considerations

When changing AI providers, you may notice differences in:

- Writing style

- Response length
- Creativity
- Processing speed
- Output formatting

These differences are normal and can usually be adjusted through prompt refinement.

Best Practices

- ✓ Use the same AI provider across all AI nodes for consistent results.
- ✓ Keep prompts clear and concise.
- ✓ Review generated responses after changing models.
- ✓ Test every category before activating the workflow.
- ✓ Document any custom prompt changes for future maintenance.

Troubleshooting

Issue

Responses are shorter or longer than expected.

Solution

Adjust the prompt instructions to specify the desired level of detail and writing style.

Issue

Classification results are inconsistent.

Solution

Review the Email Classification prompt and ensure category descriptions are clear and unambiguous.

Issue

AI responses differ after switching providers.

Solution

Different AI models interpret prompts differently. Fine-tune the prompts and test multiple scenarios to achieve the desired output.

Future AI Upgrades

The modular structure of this workflow allows you to adopt newer AI models as they become available.

Upgrading the AI provider typically requires updating only the AI nodes and credentials, while the overall workflow logic remains unchanged.

Chapter Summary

This chapter explained how to:

- Understand the role of AI within the workflow
- Replace the default AI provider
- Configure new AI credentials
- Maintain prompt compatibility
- Test the workflow after switching models
- Optimize prompts for different business requirements

The workflow is designed to remain flexible, allowing businesses to adopt future AI technologies with minimal changes.
